NON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

## How to Receive NICAM TV Programmes

This TV is capable of receiving NICAM, which is a newly developed digital stereo broadcast for TV programmes.

NICAM programmes are broadcast in three ways: stereo, bilingual or monaural sound besides the regular (FM mono) sound. You can select the sound you want to hear by pressing the A / B button.

Action	Result
Press A/B on the Remote Commander.	The NICAM sound mode changes respectively. The selected sound mode differs depending on the broadcast.

#### The selected sound mode

NICAM sound being broadcast	The sound you hear		
Stereo	Stereo → Regular → Stereo (etc.)		
Bilingual	$A \rightarrow B \rightarrow Regular \rightarrow A (etc.)$		
Monaural	A → Regular → A (etc.)		

#### On-screen indications and the NICAM indicator

The selected mode (STEREO, MONAURAL, SOUND-A or SOUND-B) appears on screen, and the NICAM indicator on the TV lights up as indicated in the following chart:

The sound being broadcasted	The selected sound	NICAM indicator	Indications on the screen
NICAM + Regular	Stereo	×	STEREO
	A	×	SOUND-A
	В	×	SOUND-B
	Regular	×	MONAURAL
Regular	Regular	0	0

<sup>×</sup> means that the indicator lights up or the indication appears.

#### The sound heard when you turn on the TV

Depending on the NICAM sound programme, the sound heard when you turn on the TV is different.

NICAM sound programme	The sound heard	
NICAM sound and the regular sound are the same	NICAM sound	
NICAM sound and the regular sound are different	Regular sound	

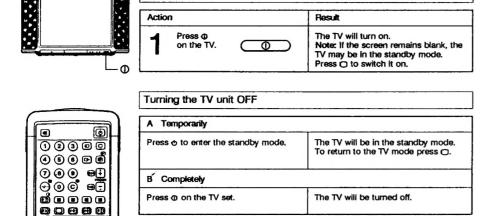

O means that the indicator does not light up or the indication is not displayed.

## **SECTION 1 GENERAL**

## Turning the TV unit ON and OFF

Turning the TV unit ON

After you have completed the basic preparation your TV is ready to be connected to the mains power supply (220/240V-, 50Hz).

## TV channel presetting

After installing the TV set, TV channels must be preset.

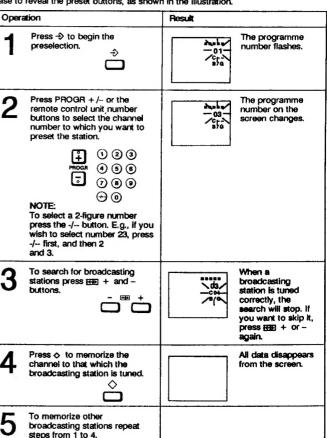

TV broadcasting stations broadcast their programmes on certain fixed frequencies (channels). In order to receive these programmes it is necessary to search for the relevant broadcasting station and to set record it as a channel. The "programme number" is the number that the user decides to associate with a certain channel.

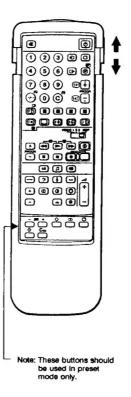

For channel settings there are 60 positions available in the memory. In this way all stations broadcasting within the user's country can be received and recorded as a

#### TV channels automatic presetting

If you are unfamiliar with the transmission frequency of the channels you wish to preset, refer to the section "TV channels automatic presetting". However, if you want to tune them using the frequency of each channel, go to the section "Direct TV channel setting".

To select a button on the "complete" side, take out the remote control unit from its case to reveal the preset buttons, as shown in the illustration.

#### Broadcasting station identification

By associating a name with a certain broadcasting station it is possible to avoid having to remember, each time, in which channel number that particular station has been memorized.

Five different characters are available for station identification.

#### Temporary channel tuning

It is possible to temporarily memorize a channel, even if it has not been preset.

Operation		Result	
1	Press C. Press C twice for a cable station.	"C" ("S" for cable stations) indication appears on the screen.	
2	Using the number keys of the remote control unit select the channel number, always with two figures (e.g., "04" for channel "4").	The channel will be received, but it will not be set as a programme number.

Using the PROGR + /- buttons you can skip unused programme numbers. However, the skipped numbers may still be called up using the number buttons.

Opera	ation		Result	
1	Press → to be	gin presetting.	- 08 - 03h - 03h	The programme number begins to flash on the screen.
2	buttons, or the the remote cor the programme wish to skip.	000	\ds/ \cos -cos -e/o	The programme number changes.
3	Press C <sub>00</sub> .	C <sub>00</sub>	\ds/ -cs2 /*(°	Under the programme number, the lowest channel number appears.
4	Press ♦ .	ô	03	All indications under the programme number disappear from the screen. The skipped programme number will be memorized.

#### Manual fine tuning

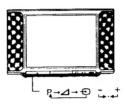

If the picture is not perfect, it is possible to fine tune it manually.

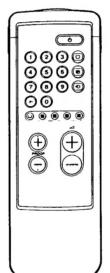

Operation	Result
Press (HP) + or - repeatedly until the picture is at the optimum.	The indication ←F→ appears on the screen.
Press - to start preselection.	The programme number starts flashing on the screen.
Press ♦.	Manual fine tuning has been memorized.

Note: Manual fine tuning will be reset when the channel is selected again.

## **Basic functions**

To open, press the arrow 1.

This section introduces you to the basic control functions which are available on the "simple" side of the remote control unit.

#### Programme selection

Before selecting programmes make sure that TV channels have been memorized.

Operation	Result
Press PROGR + /- buttons or the number keys of the remote control unit. To select a 2-figure number press -/ button.  E.g., if you wish to select number 23, press -/ first, and then 2 and 3.	04 The selected programme number appears on the screen.

## Volume control

Operation		Result
Press ⊿ + or	$\bigoplus_{i=1}^{n}$	The volume indication appears on the screen.

#### Use of additional functions

#### Use of other functions with the TV set buttons

It is also possible to select programmes and to adjust the volume by using P→△→⊕and →•← + or – buttons, located on the front panel of the TV set. In this case, press first P→△→⊕ until the indication P (channel) or △ (volume) appears on the screen, and then press →•← + or – buttons.

#### Use of teletext service

Press . To return to the TV mode, press . For further information on the teletext service see page 12.

#### Selection of the video input

This section explains the use of functions for adjusting pictures and sound. Use the "complete" side of the remote control unit.

The following functions can be used.

Although the picture and sound have been adjusted at the factory, you might want to adjust them to your own taste. To do this, please follow the steps below.

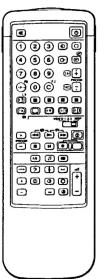

To Adjust:	Press:	Then:	Result: (+ ++ -)
Picture:			
Colour intensity	•		More ↔ Less
Contrast	0	+	More Less
Brightness	ø		Bright ++ Dark
Hue (for NTSC only)	túzi		Reddish ↔ Greenish
Sharpness	Φ.		More ↔ Less
Sound:			
Bass	2	+	More ↔ Less
Treble	+		More Lass
Balance	Δ4		Left ↔ Right

To reset the picture and sound to factory set levels, press →• ←.

On the set: Press the ->-- and +/- buttons simultaneously.

## Use of the teletext service

Through the teletext service a great deal of information can be received at any time. Broadcasting stations make this service available through TV broadcasts. To use the teletext service, use the green keys on the "complete" side of the remote control unit. When the "simple" side of the remote control unit is used, only the basic functions are

Opera	ation	Result
1	Select the channel you want to watch.	The channel changes on the screen
2	Press @	If there is no teletext signal, the indication "Page 100" appears on the screen.
3	Use the number keys of the remote control unit to insert the three figures corresponding to the desired teletext page.  Note In case of a mistake, press any three numbers, and then repeat the operation with the correct numbers.	The selected page number appears on the screen. After a few seconds, the selected page appears on the screen.
	To return to normal TV programm Press C.	es:
	To change teletext channel: First press () to return to the TV	mode, and then repeat steps 1 to 3.

Note: A weak TV signal may cause trouble in the use of teletext.

#### Use of special teletext functions

Required function	Operation	Result (on the s	creen)
Page index required.	Press Ø (INDEX).	INDEX E	Page Index appears.
Sub-pages required (page 888).	Press .		The sub-page appears (page 888).
Access to previous or following pages.	Press @ (PAGE +) or @ (PAGE -).	P201	The preceding or the following page appears.

Required function	Operation	Result (on the screen)	
Superimposition of the teletext on the TV programme.	In the TV mode, press @ twice.  To return to the normal teletext function press @ again.	Teletext information will appear superimposed on the TV programme.	
To prevent page changes due to page updating.	Press @ (STILL). Press @ (TXT/MIX) to return to the normal function.	The @ (STILL) symbol appears on the screen.	
Magnification of teletext characters.	Press ⊕ once to magnify the upper half of the screen. Press twice to magnify the lower half of the screen. By pressing the button three times the normal vision is restored.	The upper or the lower half of the page is magnified.	
Display of hidden information (answers to quizzes, etc.).	Press @ (RIV).  Press again to hide the answers.	The information is displayed.	
Watching a programme while	Ask again for the page.	The number is displayed.	
the teletext searches for the required page.	2. Press ®	TV programme is displayed.	
	When the required page has been found, the page number will be displayed.	P201	
	4. Press @ to display the page.	The desired page will be displayed.	
Display of a page at a preset time.	Request the page.	The selected page will be displayed.	
	2. Press @ (MEM.T).	In the lower part of the screen the indication "T****" appears.	
	3. Set the required time by using the number keys, and by inputting four figures (e.g. 0730 for "7:30").	The required time is displayed on the screen.	
	To watch TV programmes until a property of the required to the upper part of the screen. Press	me, the selected page appears in	
	To cancel the request Display the teletext page and then p	oress to (CANC.M.).	

9

Note: Depending on the teletext service, certain functions may not be available.

#### Use of the teletext service

#### Use of the FASTEXT function

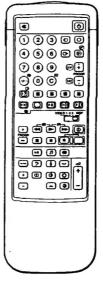

The FASTEXT function allows rapid access, at the touch of a single button, to the teletext functions. In the lower part of the screen, a colour coded index will be displayed when a FASTEXT teletext page is broadcasted. Each colour corresponds to the colored keys on the remote control unit.

#### Operation

Operation	Result
Press one of the coloured keys on the remote control unit corresponding to the coloured indications of the FASTEXT teletext page.	The selected teletext page appears on the screen.

#### Note:

The correct use of the FASTEXT function depends on the signal being broadcast by the TV stations. Some TV stations may not broadcast FASTEXT teletext signal.

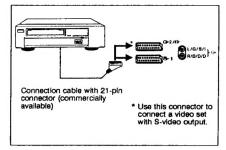

#### Connection to an external audio/video system

This TV set incorporates three groups of connectors, for input and output to the TV signal. Each group has the following characteristics.

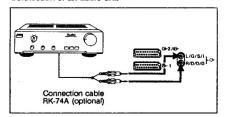

Connector	Input signal	Output signal
<b>∂</b> −1	Normal audio/video signal or RGB signal	TV tuner audio/video signal
G-2/G-	Normal audio/video signal and S-video signal	Audio/video signal from a selectable source
-G, ⊕, -D front panel	Normal audio/video signal and S-video signal	No signal

#### Connection of a TV set

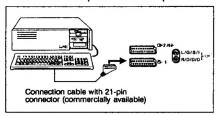

#### Connection of an audio unit

0

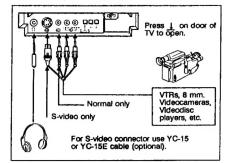

#### Connection to a computer with RGB output

#### Temporary connection of video apparatus For a temporary connection (e.g. of a videocamera)

use the front panel terminals.

## Connection of a videotape recorder through the $\ensuremath{\neg} \ensuremath{\tau}$ connector

Connect the antenna input (AERIAL-IN) of the TV set to the antenna output (AERIAL-OUT) of the videotape recorder.

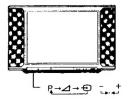

#### S-video input (Y/C input)

The video signal is formed by two separate signals: the luminance (Y) and the chrominance (C). Through the separation of the two signals it is possible to improve picture quality (luminance in particular), preventing reciprocal interference. This TV set features two S-video sockets able to directly receive this type of signal.

#### Pictures with distortion

Move the TV set away from the videotape recorder if pictures or sound become distorted.

## Connections and optional functions

#### Video programme playback

Using the input selector, pictures coming from a videotape recorder connected to the TV sets input may be played back.

#### Operation

Operation	Result	
Select the desired video input by pressing € repeatedly.	The symbol of the selected input appears on the screen (see table below).	

Press O button to return to TV mode.

#### Selectable inputs

Symbol	Selected input
<b>⊕</b> 1	Audio/video signal from ≅-1 connector.
-ō	RGB signal from ©-1 connector.
<b>ഉ</b> 2	Audio/video signal from @- 2/@- connector.
-92	S-video signal (from a VTR with S-video output) from G- 2/G- connector.
€3	Audio/video signal from ⑤, ⊸€ connector located on the front panel.
-93	S-video signal from S-video - (4 pin) connector located on the front panel.

Input can be selected also with the  $p \rightarrow \triangle \rightarrow \bigcirc$  buttons of the TV set.

In this case, first select ⊕, and then press the + /- buttons to select the desired input.

#### Selection of video output

The G-2/g-connector may output 4 video signals. Select the outgoing video signal in the following way.

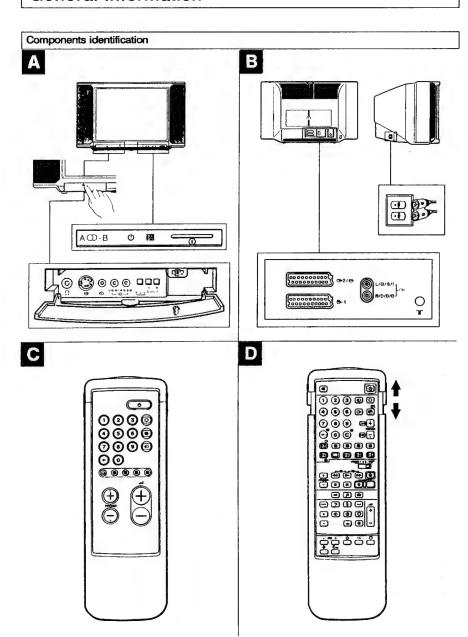

#### Operation

Operation	Result
Press : repeatedly to select the desired video output.	The selected video output symbol appears on the screen (see the table following).

#### Output signal

Symbol	Selected output
1 🕒	Audio/video signal from @1 connector.
2⊖	Audio/video signal from @- 2/@- connector.
3 ເታ	Audio/video signal from ⊕ and ⊕ connectors.
TV G•	Audio/video signal from T-type antenna connector Tr.

# SECTION 2 DISASSEMBLY

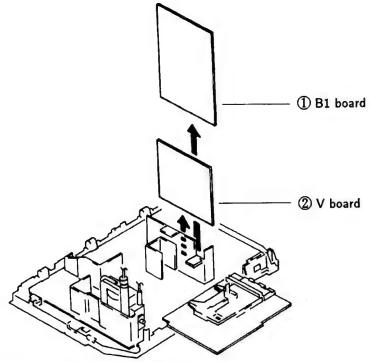

### 2-1. REAR COVER REMOVAL

### 2-2. CHASSIS ASSEMBLY REMOVAL

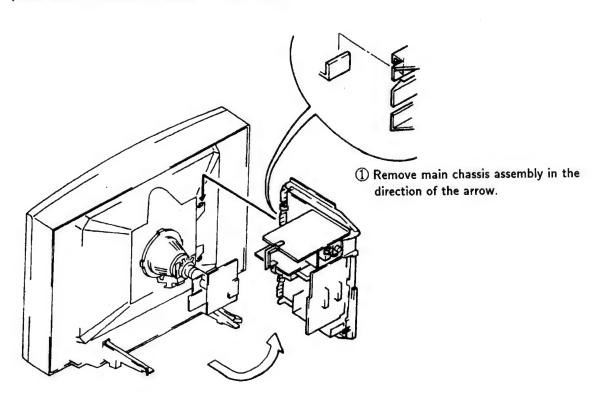

## 2-4. B1 AND V BOARDS REMOVAL

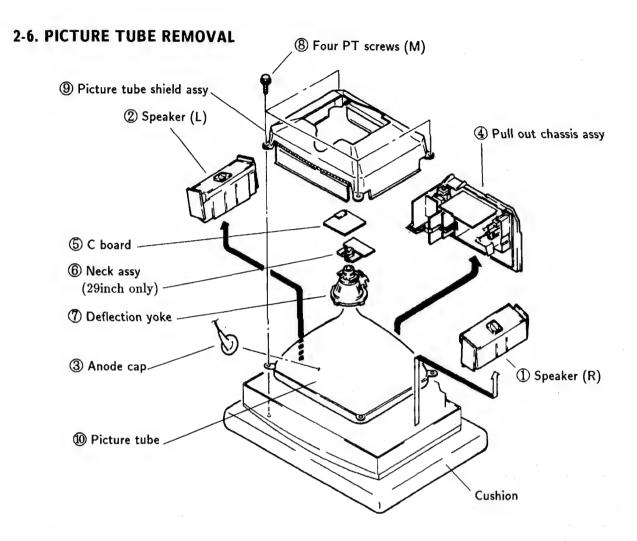

Note: 10 pin extension cable (S-0945-001-0)

## 2-5. SERVICE POSITION

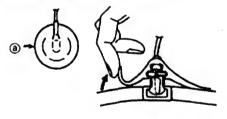

\* Remove the connector bracket from the main chassis assembly and then perform the following servicing.
(Refer to 2-2. CHASSIS ASSEMBLY REMOVAL.)

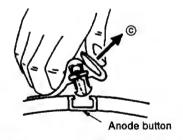

## REMOVAL OF ANODE-CAP

#### REMOVING PROCEDURES

arrow (b).

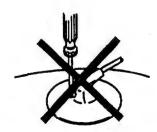

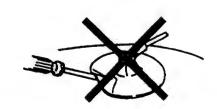

3 When one side of the rubber cap is separated from the anode button, the anode-cap can be removed by turning up the rubber cap and pulling up it in the direction of the arrow ©.

#### - HOW TO HANDLE AN ANODE-CAP

the direction indicated by the arrow @.

- Don't hurt the surface of anode-caps with sharp shaped material!
- Don't press the rubber hardly not to hurt inside of anode-caps! A material fitting called as shatter-hook terminal is built in the rubber.
- Don't turn the foot of rubber over hardly! The shatter-hook terminal will stick out or hurt the rubber.

# SECITON 3 SET-UP ADJUSTMENTS

- When complete readjustment is necessary or a new picture tube is installed, carry out the following adjustments.
- Unless there is specific instruction to the contrary, carry out these adjustments with the rated power supply.
- Unless there is specific instruction to the contrary, set the controls and switches this way:

① Contrast .....80%

(or remote control normal)

☼ Brightness ······50%

- Carry out the following adjustments in this order:
  - 1. Beam landing
  - 2. Convergence
  - 3. Focus
  - 4. White balance

Note: Testing equipment required

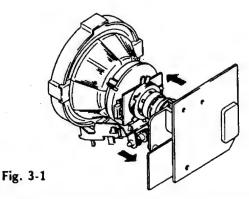

- 1. Color bar/pattern generator
- 2. Degausser
- 3. DC power supply
- 4. Digital multimeter
- 5. Oscilloscope

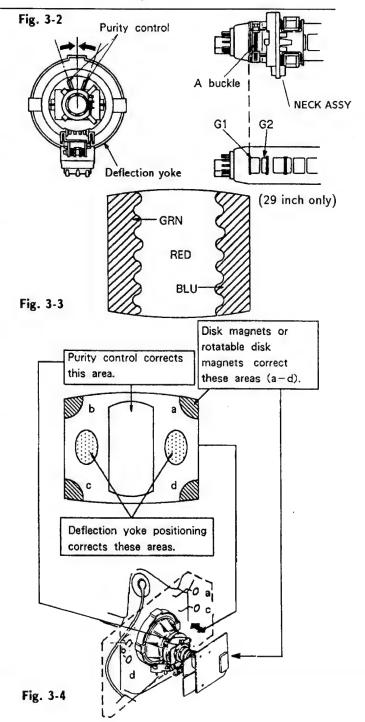

#### Preparations:

- In order to reduce the influence of geomagnetism on the set's picture tube face it east or west.
- Switch on the set's power and degauss with the degausser.

#### 3-1. BEAM LANDING

- Input the white signal with the pattern generator.
   Contrast
   Bightness normal
  - . Position neck ass'y as shown in Fig 3-2.
- 3. Set the pattern generator raster signal to red.
- 4. Move the deflection yoke to the rear and adjust with the purity control so that the red is at the center and the blue and the green take up equally sized areas on each side.
  - (See Figures 3-1 through 3-3.)
- 5. Move the deflection yoke forward and adjust so that entire screen is red. (See Figure 3-1.)
- 6. Switch the raster signal to blue, then to green and verify the condition.
- When the position of the deflection yoke has been decided, fasten the deflection yoke with the screws.
- If the beam does not land correctly in all the corners, use a magnet to adjust it. (See Figure 3-4.)

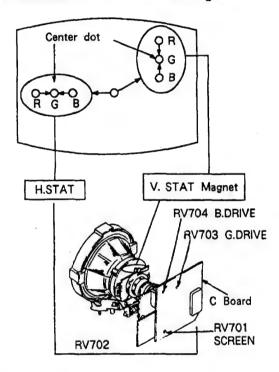

#### 3-2. CONVERGENCE

### Preparations:

- Before starting this adjustment, adjust the focus, horizontal size, and vertical size.
- Minimize the brightness setting.
- Provide dot pattern.

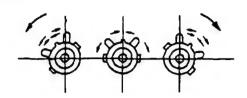

#### (1) Horizontal and vertical static convergence

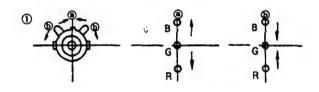

- (Moving horizontally), adjust the H.STAT control so that the red, green, and blue points are on top of each other at the center of the screen.
- (Moving vertically), adjust the V.STAT magnet so that the red, green, and blue points are on top of each other at the center of the screen.
- 3. If the H.STAT variable resistor cannot bring the red, green, and blue points together at the center of the screen, adjust the horizontal convergence with the H.STAT variable resistor and the V. STAT magnet in the manner given below.

  (In this case, the H.STAT variable resistor and the V.STAT magnet influence each other)

 Tilt the V.STAT magnet and adjust the static convergence by opening or closing the V.STAT magnet.

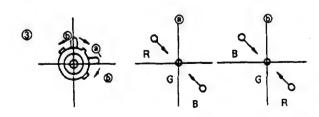

4. If the V.STAT magnet is moved in the direction of the (a) and (b) arrows, the red, green, and blue points move as shown below.

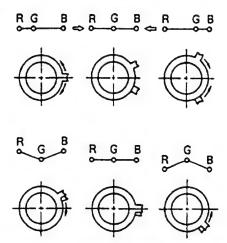

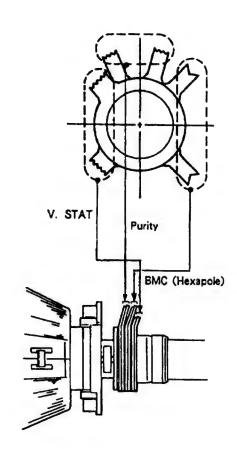

• Operation of BMC (Hexapole) Magnet

 The respective dot positions resulting from moving each magnet interact, so be sure to perform adjustment while tracking.
 Use the H.STAT VR to adjust the red, green, and blue dots so they coincide at the center of screen (by moving the dots in the horizontal direction).

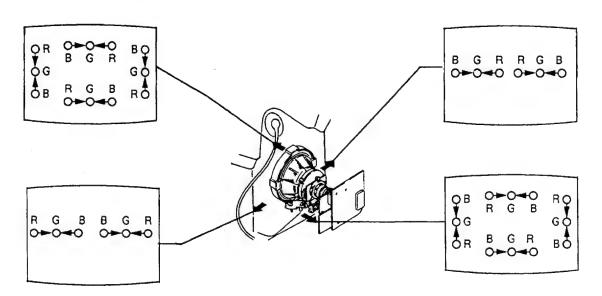

# (2) Dynamic convergence adjustment Preparations:

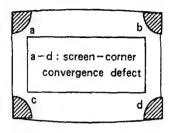

Before starting this adjustment, adjust the horizontal static convergence and the vertical static convergence.

- 1. Slightly loosen the deflection yoke screws.
- 2. Remove the deflection yoke spacer.

- 3. Move the deflection yoke as shown in the figure below and optimize the convergence.
- 4. Tighten the deflection yoke screws.
- 5. Install the defelection yoke spacer.

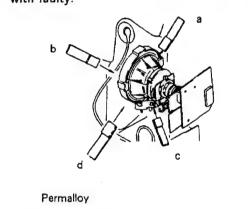

#### (3) Screen corner convergence

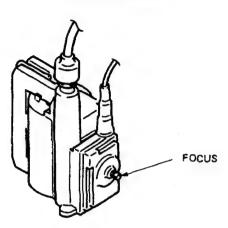

Install the permalloy assembly for the section with faulty.

#### 3-3. FOCUS

Adjust the focus to optimize the screen.

#### 3-4. WHITE BALANCE

#### [Screen G2 setting]

- 1. Input the dot signal from the pattern generator.
- 2. Set the picture brightness control to its lowest level.
- 3. Apply 170V DC to the R, G, and B cathodes with an external power supply.
- While watching the picture, adjust G2 control RV701 (Screen) to the point just before the return lines disappear.

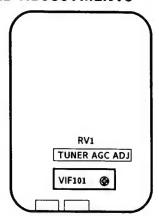

### [ White balance adjustment ]

- 1. Input an all-white signal from the pattern generator.
- 2. Set the picture brightness and color controls to their normal levels.
- 3. Use the RV704 (B Drive) and RV703 (G Drive) to adjust white balance.

In the adjustments below, have the picture color and brightness settings at their normal levels unless there is a specific instruction to the contrary.

# SECTION 4 CIRCUIT ADJUSTMENTS

#### 4-1. A BOARD ADJUSTMENTS

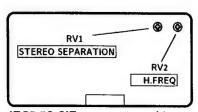

A BOARD (COMPONENT SIDE)

### TUNER AGC ADJUSTMENT (VIF101, RV1)

- 1. Align with an appropriate signal between stations.
- Adjust RV1 so that snow noise and cross modulation just disappear from the picture.

#### IFG5.5S SIF

IFG5.5S SIF -component side-

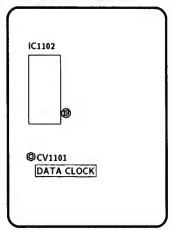

### STEREO SEPALATION ADJUSTMENT (RV1)

- 1. Input stereo signals. (L-CH 400Hz, R-CH 1KHz)
- 2. Check the stereo indicator.
- 3. Connect on oscilloscope to pin® (CH1) of CN1 through band pass filter of 1KHz
- 4. Adjust RV1 so that 1KHz voltage goes down to the minmum.

#### H FREQ (RV2)

- 1. Input a PAL COLOR BAR signal, then connect a jumper between pin<sup>®</sup> IC4 and GND.
- 2. Connect a frequency counter to pin IFG5.5S (HP) of CN1 through a probe of 10:1.
- 3. Adjust RV2 (H.FREQ)  $15.625 \pm 50$ Hz.
- 4. After adjustment, remove the jamper.

#### 4-2. A1 BOARD ADJUSTMENT

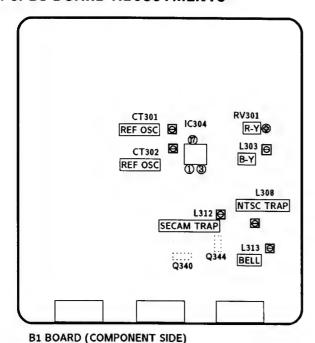

A1 BOARD (COMPONENT SIDE)

## DATA CLOCK Adjustment (CV1101)

- 1. Tune in a no signal.
- 2. Connect a frequency counter to pin (9) of IC1102 (PCLK) through a probe of 10:1.
- 3. Adjust CV1101 (DATA CLOCK) so that frequency becomes 728.022KHz±1Hz.

#### 4-3. B1 BOARD ADJUSTMENTS

# REFERENCE OSCILLATOR ADJUSTMENT (CT302 8.8MHz)

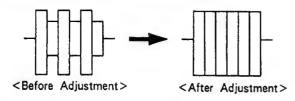

- 1. Input a PAL color bar signal.
- 2. Ground pin To of the IC304.
- 3. Adjust CT302 to obtain synchronization.

# REFERENCE OSCILLATOR ADJUSTMENT (CT301 7.16MHz)

- 1. Input an NTSC color bar signal.
- 2. Ground pin @ of IC304.
- 3. Adjust the CT301 to obtain synchronization.
- 4. Remove the jumper grounding pin ① of IC304.

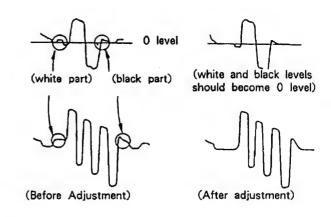

## **BELL FILTER ADJUSTMENT (L313)**

- 1. Input a SECAM color bar signal.
- 2. Connect the oscilloscope to the emitter of Q344.
- 3. Adjust L313 so that the waveform is flat.

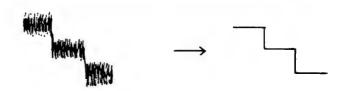

## DISCRIMINATION ADJUSTMENTS (RV301 and L303)

- 1. Input a SECAM color bar signal.
- 2. Connect the oscilloscope to pin ① of IC304.
- Adjust RV301 until the white and black sections
  of the waveform at pin ① are at the 0 level.
  Connect the oscilloscope to pin ③ of IC304.
- 4. Adjust L303 until the white and black sections of
- 5. the waveform at pin 3 are at the 0 level.

## SECAM TRAP (L312)

- 1. Input a SECAM color bar signal.
- 2. Connect oscilloscope to Q340 emitter and adjust L312 to minimize color carrier on the Y-signal.

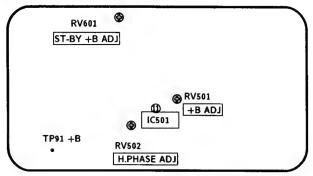

## NTSC TRAP (L308)

- 1. Input a NTSC (3.58) color bar signal.
- 2. Connect oscilloscope to Q340 emitter and adjust L308 to minimize color carrier on the Y-signal.

#### 4-4. D BOARD ADJUSTMENTS

D BOARD (COMPONENT SIDE)

## +B ADJUSTMENT (RV501)

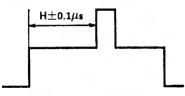

- 1. Connect the digital multimeter to TP91.
- 2. Adjust RV501 to obtain  $135 \pm 0.2$ V.

## ST-BY +B ADJUSTMENT (RV601)

- Put the system into standby mode (remote commander).
- 2. Connect the digital multimeter to TP91.
- 3. Adjust RV601 to obtain  $135 \pm 3V$ .
- 4. Take the system out of  $\circlearrowleft$  standby mode (remote commander).

#### H.PHASE ADJUSTMENT (RV502)

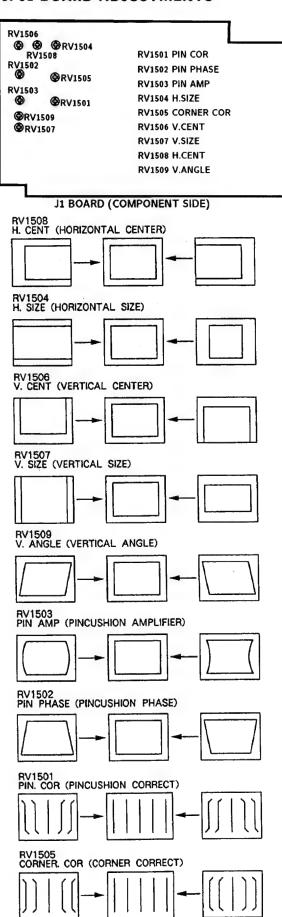

- 1. Input a PAL color bar signal.
- Set the picture and brightness controls to their normal levels.
- 3. Set RV1508 (H.CENT) to its mechanical center.
- 4. Connect the oscilloscope to pin (I) (SCP) of IC 501.
- 5. Rotate RV502 to adjust to  $H \pm 0.1 \mu s$ .

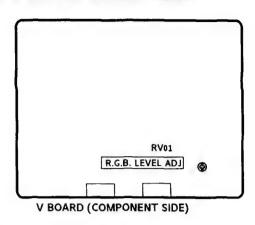

Standard of H. PHASE

Model Size	Н
25 "	$5.1 \mu \mathrm{s}$
29 "	$5.5 \mu \mathrm{s}$

#### 4-5. J1 BOARD ADJUSTMENTS

#### 4-6. V BOARD ADJUSTMENT

## RGB LEVEL ADJUSTMENT (RV01)

- 1. Maximize the picture setting.
- 2. Adjust RV01 so that the RGB output is 0.75V.

#### 4-7. SECONDARY ADJUSTMENTS

#### SUB BRIGHTNESS ADJUSTMENT

- 1. Set the system to receive a test pattern.
- Press → ← on the remote commander to put the system into normal mode.
- 3. Switch off the power.
- 4. While depressing the adjusting buttons + and
   simultaneusly, turn on the power. (SUB mode is obtained)
- 5. Minimize the O contrast setting.
- 6. Adjust the ☆ brightness control so that the gray scale 0 IRE section is cut off completely and the 20 IRE section is barely glowing.
- 7. Depress the  $\diamondsuit$  (store) button of the remote commander.

(SUB mode is released)

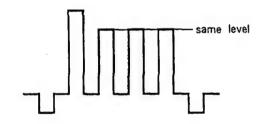

If there is no test color pattern

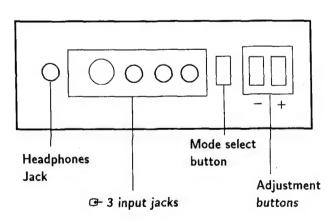

- 1. Set the system to receive a color pattern.
- Press → ← on the remote commander to put the system into normal mode.
   Set the ② color to its normal state.

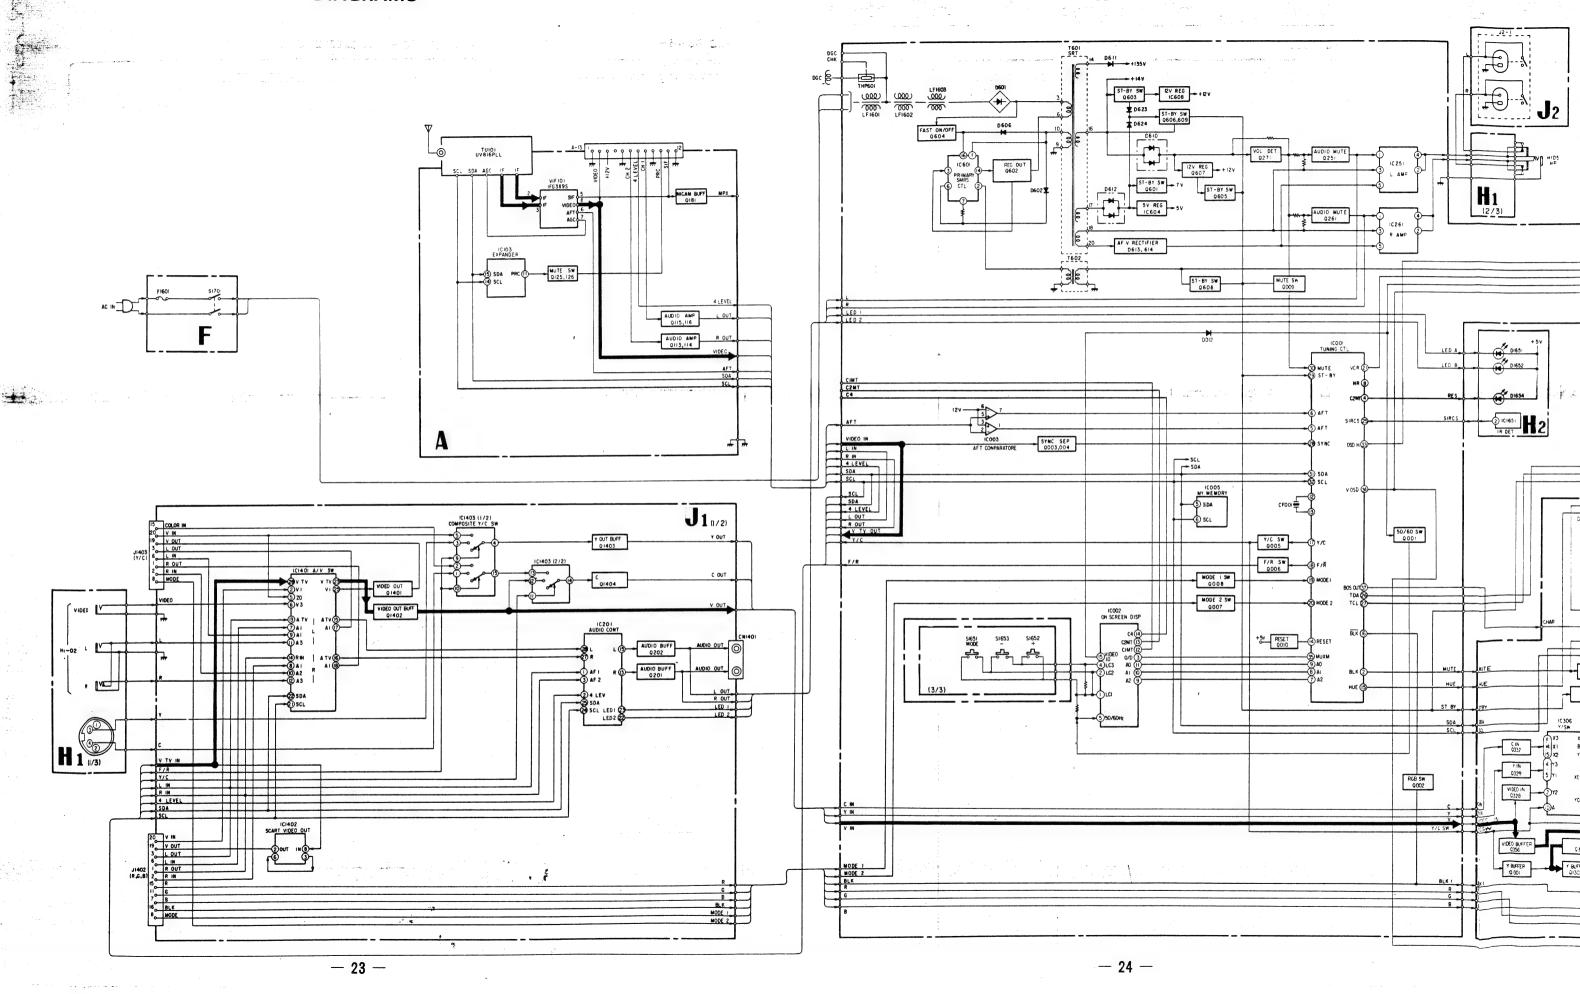

- 3-5. Steps are the same as above.
- 6. Since 20 IRE is nearly blue, adjust the ☆ brightness control so that the blue barely glows.
- 7. Same as step 7 above.
- Press → ← on the remote commander to put the system into normal mode.

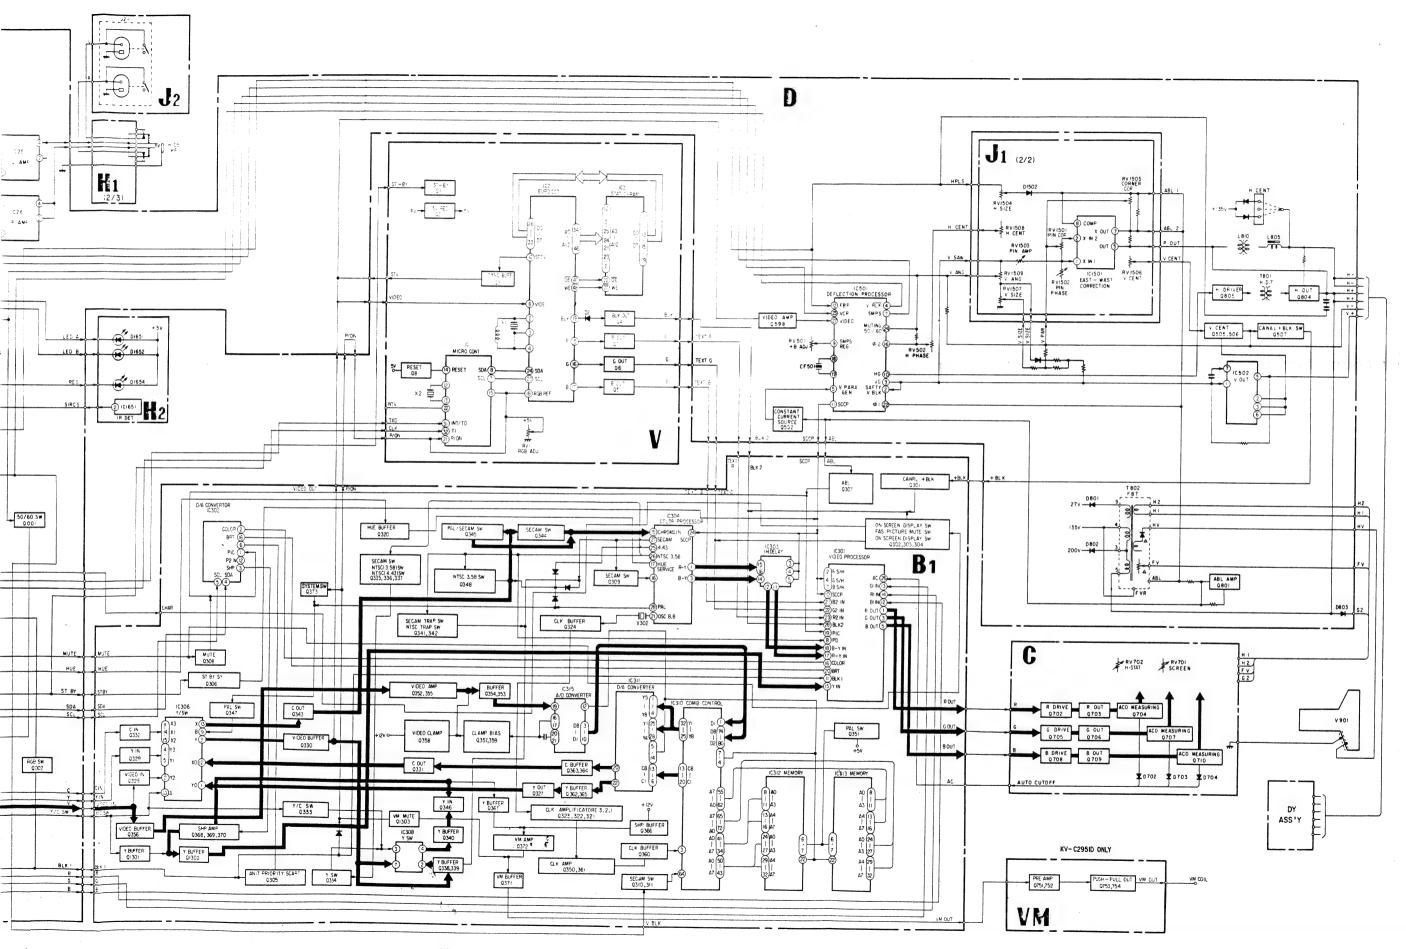

## SUB COLOR ADJUSTMENT

- 1. Set the system to receive color bars.
- Press → ← on the remote commander to put the system into normal mode.
- 3. Cut off the power.
- While depressing the adjustment buttons + and
   - simultaneously, turn on the power. (SUB mode is obtained).
- 5. Adjust the color control so that the B out waveform (pin ⑤ of C board connector CNC72) is as shown in the figure below.
- 6. Depress the  $\diamondsuit$  (store) button of the remote commander. (SUB mode is released)

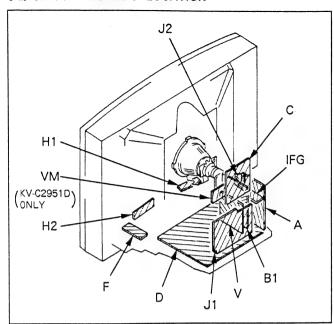

#### 5-2. CIRCUIT BOARDS LOCATION

#### Reference information

RESISTOR	: RN	METAL FILM

#### 5-3. SCHEMATIC DIAGRAM AND PRINTED WIRING BOARDS

Note: The components identified by shading and mark

A are critical for safety. Replace only with part number specified.

#### Note:

- All capacitors are in  $\mu F$  unless otherwise noted.  $pF: \mu \mu F$  50WV or less are not indicated except for electrolytics.
- Indication of resistance, which does not have one for rating electrical power, is as follows.

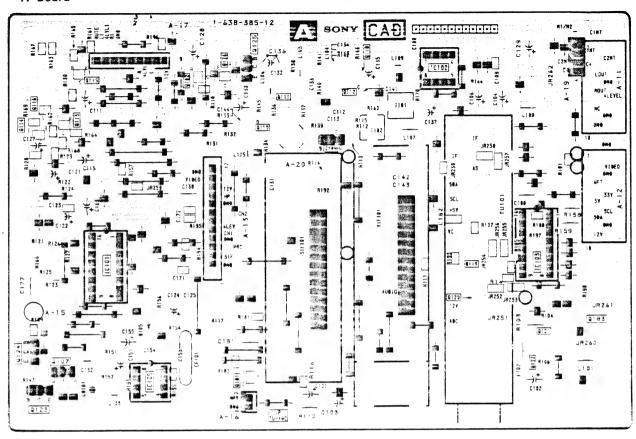

Pitch: 5mm Rating electrical power: 1/4W

- Chip resistor is in 1/10W.
- All resistors are in ohms:  $k\Omega = 1000\Omega$ ,  $M\Omega = 1000k\Omega$
- monflammable resistor.
- fusible resistor.
- $\triangle$ : internal component.
- panel designation and adjustment for repair.
- All variable and adjustable resistors have characteristic curve B.unless otherwise noted.
- All voltages are in V.
- Readings are taken with a  $10M\Omega$  digital multimeter.
- Readings are taken with a color-bar signal input.
- Voltage variations may be noted due to normal production tolerances.
- = : B + line.
- signal path. (RF)
